```
#3

• T(n) = 7 \cdot T(\frac{n}{2}) + O(n^2)

Thromerous samp meaning

S(n) = 1, k = 2, q = 7, b = 2

2 \le \log_2 7

K \ge \log_3 q = 7 \cdot T(n) = O(n^{\log_2 7}) \approx O(n^{2,807})

• T(n) = \mathcal{L} \cdot T(\frac{n}{7}) + O(n^2)

k = 2, q = \mathcal{L}, b = 4

2 ? \log_4 d
```

(1) Eun
$$2 > \log_4 \lambda => \lambda < 16 => T(n) = O(n^2)$$
, no yunomenul nompuy = $\Re (n^{(2+E)})$, ze $E > 0 => 0 < 16$ no nogrozum

(3) Eum
$$2 \angle \log_4 \lambda = 3 \angle > 16 = 7 T(n) = O(n^{\log_6 \lambda}) = O(n^{\log_4 \lambda})$$

Ppu $d = 49$, $n^{\log_4 k 9} = n^{\log_2 k 7} = 9$ npu $16 \angle 2 \angle 49$, autonum mult byzen benee 390 permubrai aunummure en $n = 16$
